

Starsys Instrument Storage!

Instrument accountability affects any facility that relies on reusable surgical instruments. By implementing an accountability policy along with better organization of instruments, the facility can keep replacement costs down and save money.

The Starsys Instrument Storage cabinet provides an excellent method of inventorying and organizing instruments. The Starsys Clear Door offers end users quick visual identification of sterile instruments.

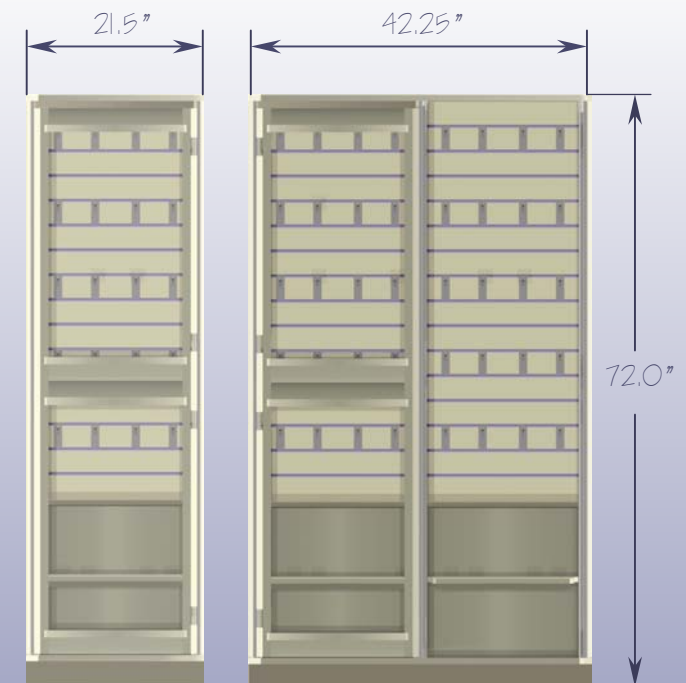

The cost of storing and organizing instruments can be surprisingly small when compared to the cost of frequently replacing missing instruments.

The double-wide Starsys unit can organize over 3,000 instruments – costing as little as 50 cents per instrument!

The Starsys Instrument Storage cabinet is available in both single and double-wide configurations. The upper 48" of each cabinet is fitted with a "slat wall" back panel. The panel offers 15 channels in which 6", 8" or 10" hooks can be easily distributed and adjusted to maximize instrument storage. The lower section of each unit has two shelves to organize instruments that can not be easily hung in the upper section.

If you have further questions on Starsys Instrument Storage Cabinets, the Starsys Team is ready to assist you.
