Recycle Plastics
Microban Additives

The use of Microban antimicrobial additives will not affect the ability of a manufacturer, consumer or end user of our additives to offer the treated plastic for recycling. It is important to remember a plastic may contain many other additives, in addition to an antimicrobial. These other additives include colorants, stabilizers, fillers, antistatic agents etc.

The Microban additives are typically used at low levels, in the parts per million. There are no specific regulations or rules which would prevent a treated material from being offered for recycle.

If you have any questions or require any additional information, please feel free to contact us
